while choice is 1 or 2

End of do-while loop evaluate choice variable

while choice is not 1 or 2

END

Write a program that converts Celsius to Fahrenheit. The formula is F = 9/5C + 32.
1. Add a menu (ask user to choose from C-F or F-C orEnd Session)

2. Make it loop and create a Quit the Program option. (***Note: End session and Quit the program are two different things)
3. Be sure it converts correctly and handles error checking.
